

Background on Geopathic stress: Hartman grids, Under ground water streams & its impact on our health:

Geopathic stress (GS) represents a distortion of natural frequency of Earth's Vibration by weak electromagnetic fields created by streams of water flowing underground, geological fault lines, underground caverns, and certain mineral deposits (coal, oil, and iron). For example, where the inner Earth's vibration of 7.83 Hz crosses a water vein 200 to 500 feet below ground, stress lines vibrating at up to 250 Hz can be created. Biological rhythms, physical wellbeing and mental states are dependent on our electrical brainwave system interacting with the extremely weak electromagnetic fields generated by the Earth's telluric and cosmic radiations. Any distortion of this 7.83 Hz level creates a stress with the potential to weaken the immune system of any mammal living above the distortion, leading to greater susceptibility to viruses, bacteria, parasites, environmental pollution, and a wide range of health problems both Physical and Psychological.

The present scientific evidence of effects of Geopathic zones on humans has been mainly found using complementary medical methods.

Research work in this area was initiated by **Baron Gustav von Pohl of Germany**, in 1930s did research on relation of Geopathic stress on cancer. He also determined that 95% of all cancer cases had connections to geostress.

After that many Research Papers were published, which pointed towards the seriousness of the Universal problem of the Geopathic stress Following are few notable ones.

Ernst Hartmann. Germany (1940's-60)

Hartmann was the first to describe the global geomagnetic grids and their influence on Geostress. After extensive testing that spanned over 30 years of research, he concluded that cancer is a disease of location.

Manfred Curry. Germany (1950's-70)

Curry continued on Hartmann's work, describing other global grids and their influences.

Ralf Gordon. England (1980's-90)

Gordon correlated cancers of the lung, breast, and cervix with geostress in 90% of all cases.

Otto Bergmann. Austria (1987-89)

In a two year trial which included over 462,000 measurements in 6,942 tests, Bergmann found geopathic stress effects on blood sedimentation, blood pressure, blood circulation, Heart beat, breathing, skin resistance, and electrical conductivity of muscle points.

Kathe Bacheler. Austria (1989)

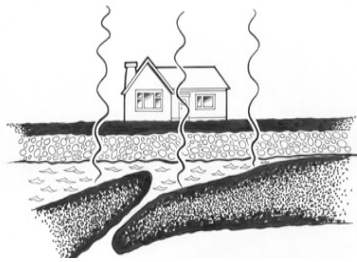

In a survey that included 3,000 apartments and over 11,000 people, Bacheler discovered 100% correlations between geopathic stress and 500 cases of cancer she studied. She also found 95% correlation with "problem" children.

Eugene Pallegard. Denmark (1990)

In a much publicized study, Pallegard correlated geostress in 14 out of 18 crib deaths.

Roger Rose. England (1990's)

In a sample of 50 patients with myelitic encephalomyelitis, Rose found 100 % correlation to Geostress.

NOT ONLY HUMANS, These Electromagnetic radiations adversely effects Vegetation and Machinery as well .

Detail from the stem of a tree, growing in the garden of Schönbrunn Castle in Vienna, Austria. The Austrian journalist expert, Prof. Gerhard KUNZE in his book „Tiergarten Schönbrunn: Zoo der glücklichen Tiere – Österreichs magischer Kraftort“ (in German language; described the results of his research on geomantic features of this world famous place. Power zones might lead to wanted short-term eustress, but longer lasting on such places can induce die adverse condition of distress. The abnormal growth shown in the stem of this tree could represent a tumor. Such disorders can be frequently found when plants grow at zones judged by dowsers as being places of geopathy. Disturbed zones can, no matter if in plants, animals or humans, weaken the immune system by causing stress. If this can also lead to the development of malignant tumors, has not yet been verified but appears to be a (rare?) possibility. Apparently, in trees it is a frequent phenomenon, although also not yet studied by means of scientifically acceptable measures.

Sick Building Syndrome (World Health Organization Report)

Jobs become more stressful due to stressful environment.

For a long time the problem of S.B.S. (sick building syndrome) has puzzled scientists and worried managers all over the world, but at long last you can do something positive about it by ensuring staff sit and work in Geopathic Stress free places. This will save thousands of money in reduced absenteeism and gain efficiency at the same time. The World Health Organization has recognized S.B.S (Sick Building syndrome). For over 10 years and they estimate 30% of offices, hotels, institutions and industrial premises have S.B.S. causing:

Headaches, tension between staff, lethargy, respiratory infection, dry skin and throat, eye symptoms, loss of concentration, depression, stress and fatigue. Ultimately this can cause a high rate of absenteeism, increase staff turnover, lowers morale and wastes industries most important assets – people.

A former council officer was awarded £67,000 compensation for mental stress caused by having moved to a stressful job. The main reason the new place was stressful was because it was very Geopathic Stressed.

Book:

Electromagnetic Environments and health in Buildings by Clements-Croome, Published in 2004 by Spon Press, London

Author:

Derek Clements- Croome is a **professor of construction Engineering at the University of reading, UK**. He researches and lectures on Intelligent Buildings and how the environment affects human performance- with a particular focus on thermal comfort, indoor quality, sound, ions & electromagnetic fields.

About the book:

This book, of which most of the chapters derive from presentations given at major international conferences, aims to present sound technical information across the whole range of key issues surrounding healthy buildings.

Excerpts:

“The effects of Electromagnetic fields are less understood hence the reason for this book...It is important to increase our understanding of the interaction between the body’s internal electromagnetic fields and those around the outside of the body.

www.rolfgordon.co.uk

Excerpts: Research has shown Geopathic Stress is mainly caused by narrow paths of running water about 200 to 300 ft below ground. This creates an electromagnetic field, which disturbs the earth's natural vibrations in particular, the beneficially 7.83 Hz (cycle per second) Alpha vibrations (confirmed by NASA). The Alpha vibrations can be as high as 250 Hz in very Geopathic Stressed people. The USA scientist George Lakowsky confirmed in the '30's that humans (and animals) have less chance of fighting bacteria and viruses at higher than normal vibrations.

The effect GS has on the human body has most convincingly proved by a major research project undertaken by the University of Vienna direct by Professor Dr Otto Berman.

In order to eliminate any placebo effect the tests were organized in a double-blind fashion. Neither examining doctors nor the people tested knew whether they had been sitting in a GS place or neutral place. 985 people were tested and subjected to a very thorough medical examination before and after tests. Tests included blood sedimentation, electric conductance of certain muscle points, blood pressure, heart beat breathing, skin resistance and blood circulation. The people tested only sat in a GS or neutral place for 15 minutes. The harmful effect could be registered in most of the people who sat in a GS place. "One can imagine the consequences which exposure to Geopathic Stress over many years could have" wrote Natural Medicine. We have hardly come across anybody who has died of meningitis, E'Coli food poisoning, BSE, Legionnaires Disease and SARS without being affected by Geopathic stress.

<http://www.positiveenergy.ie/GS/Research.htm>

Excerpts: Dr. Hager, President of the Scientific Association of Medical Doctors with the help of a professional dowser Privy Councillor C. Williams checked the houses of 5,438 people in the town of Stettin, who had died of cancer and found in all cases that strong GS lines had crossed their homes.Dr. H. Nieper MD states: '92% of all my cancer patients and 75% of my MS patients are Geopathically Stressed'. Dr. Nieper is a world renowned cancer specialist and operates one of the largest MS practices in the world.

Dr. E. Hartman MD is convinced after treating thousands of cancer patients over 30 years in practice that CANCER IS A DISEASE OF LOCATION caused by Geopathic Stress.

During a scientific test Dr. Manfred Curry a medical doctor and biochemist searched several houses where cancer patients had previously lived. Dr. Curry did not know the patients nor the details of their illness. None of the patients were in the houses during the search. Four medical doctors were invited as observers. In other words all subjective influences on the test had been excluded. In the first house Dr. Curry found by dowsing two GS lines under a bed and he said that if anyone had slept there for any length of time they would have been affected in the region of the pelvis. One of the doctors had to admit with astonishment that the bed had first been occupied by a mother and later by her daughter-in-law. The mother had died 15 years ago and the daughter-in-law 5 years ago. Both died of cancer of the uterus.

<http://www.healthyandwise.co.uk/geopathic.htm>

Excerpts: Professor Hans Dieter Betz (Professor of Physics, Munich University) headed a team of scientists that investigated the ability of dowzers to find **underground drinkable supplies**, taking them to 10 different countries and, on the advice of dowzers, sank some 2,000 wells with a very high success rate. In Sri Lanka, where the geological conditions are said to be difficult, some 691 wells were drilled, based on the advice of dowzers, with a 96% success rate. Geohydrologists given the same task took two months to evaluate a site where a dowser would complete his survey in minutes. The geohydrologists had a 21% success rate, as a result of which the German government have sponsored 100 dowzers to work in the arid zones of Southern India to find drinkable water.

In 1989, a group of researchers in Austria completed a two-year study on the short-term consequences of human association with detrimental earth radiation sites. Some 985 people were tested with 462,421 measurements recorded from 6,943 tests. The working party was headed by Dr. Otto Bergsmann (Internal Medicine), a professor at the University of Vienna. A 158 page report gave details of changes in the serum values of serotonin, zinc and calcium after being exposed to these noxious fields for a period of ten minutes. There were many other altered states to biological functions noted as a result of short-term exposure to these forces. This group has now linked with two universities in Austria studying the effects of disturbed zones on the immune system. Indications thus far support the findings of Dr. Ernst Hartmann who claimed that the **protective role of the immune system was undermined when immersed in emissions of detrimental earth radiation.**

Dr. Paul G. Seeger, Former Chief of Cancer Research, Charite` Hospital, Berlin, Germany said "No serious-minded criticism, be it ever so prejudiced, can afford to ignore proofs of the existence of pathogenic telluric influences....."
